Introduction

The National Student Loan Data System (NSLDS) uses codes to describe various loan conditions and events. These codes are concise and, like an abbreviation, describe a whole series of events using only a character or two. This saves considerable space in the database and simplifies the processing of data. The code tables contain a number of data elements listed in the Data Dictionary (Appendix A) (e.g., Code for Loan Status, Type of Deferment). The following tables list the available codes and their definitions. You should carefully match your codes to those used by NSLDS.

When the Data Dictionary refers to a field that “Must be a valid code” from a particular code table, use Appendix B to find the table. Using a code not listed on a specified table will cause an error.

Some of the codes, along with their associated dates, provide a full history of events on a loan in NSLDS. For example, you can view data in NSLDS showing when a loan was first originated (ID status), when it went into repayment (RP status), any deferment periods (DA status), and when it was paid in full (PF status). Recording of each event provides the Federal Perkins program administrators and researchers with key information on loan history. Thus, the codes are critical to the operation of the NSLDS.
